INPUT CONNECTORS

Our Tip:
Make the most of your existing sensor technology !

Our patented intelligent connector makes the ALMEMO® measuring system extraordinarily flexible.
Thus, instead of our pre-configured ALMEMO® sensors, you can use your own existing sensors.

We can supply you with ALMEMO® connectors specially pre-programmed for this purpose with the necessary sensor parameters and the appropriate measuring range. These have six screw terminals and can be easily and conveniently connected.

All devices and connectors offer the following functions :

- Each measuring point can be assigned a specific designation.
- The sensor signals can be scaled.
- Measured values can be corrected for zero-point and gain.

The new measuring instruments with ALMEMO® connectors also offer the following additional functions :

- Multi-point calibration data can be saved in the connector.
- User-defined linearization with up to 30 points can be programmed in the connector.
- Control points with actual / setpoint values tables can be entered quickly and easily via the AMR-Control software.
- Any special measuring ranges programmed in the connector can be processed.
- Calibration schedules can be managed in the connector and are detected automatically.
- The connector's exact designation can be called up.

The already high level of precision and overall performance quality provided by ALMEMO® measuring technology is thus raised even further.

Give us a description of your measuring tasks !
And we shall provide you with comprehensive advice and find the most cost-effective solution.

INPUT CONNECTORS

new!

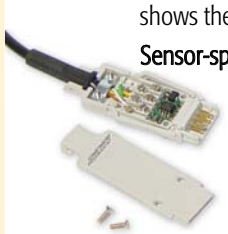
High-precision measuring operations using inexpensive standard sensors - thanks to multi-point correction

Linearization and correction of non-linear sensors

Linearization and correction at over 30 points - performed by the user - without further processing on the PC

Although special-purpose sensors with a non-linear output can usually be connected to existing measuring systems, the lack of linearization in the sensor's output signal means that the measured value will need subsequent correction to make it at all usable. AHLBORN now offers customers a revolutionary new feature - also available with hand-held devices. An option is now available allowing the user to perform linearization and multi-point correction on ALMEMO® measuring instruments. Not only all the relevant sensor characteristics but also the linearization or multi-point correction data are saved in the patented ALMEMO® connector. The measuring instrument automatically recognizes each sensor that is connected to it and shows the appropriate measured values precisely in its display.

Sensor-specific linearization data can be saved by the user in the connector itself.



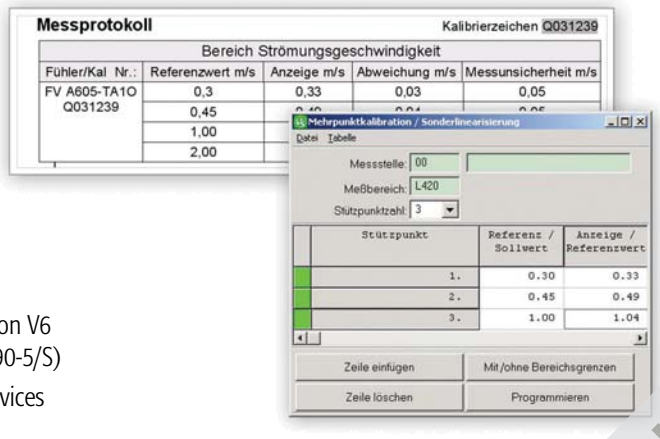
Thanks to further development of the flexible and intelligent ALMEMO® connector it is now possible to save complex tables for linearization or multi-point correction - all in the connector itself. For the user this means that it is now also possible to connect sensors with a non-linear output. The device displays measured values already in linearized form; this ensures that the whole process can be monitored right from the outset. A further advantage is the enormous saving in time when evaluating special measuring operations of this nature. For each sensor the linearization data is saved in the connector; then as soon as the sensor is plugged into the measuring instrument this data is loaded automatically. The linearization table is buffered in the main working memory on the device for the period of the measuring operation in question or for as long as the sensor remains connected. With effect from the ALMEMO® 2690-8 the user can use this "KL" option to program linearization processes of this nature quickly and easily. Individual linearization processes can be applied in the voltage, current, resistance, or frequency ranges. On request - or for other devices - readily pre-programmed connectors can be obtained from the factory. Various already implemented special-purpose linearizations are also available.

High-precision measuring operations - thanks to multi-point correction

A sensor's output signal can also be corrected at various specific points. Inexpensive standard sensors made by third-party manufacturers can be calibrated. Deviations are then saved in the sensor connector as fine corrections. This can be performed either by users themselves or on request in advance at the factory - for example for temperature calibrations. It is now possible to save not only previous characteristics but also over 30 correction points - all in the connector itself.

Programming via software

In the AMR-CONTROL software package the measuring protocol for a multi-point correction or a linearization table can be transferred to a table of reference points. Over 30 such reference points are possible. During a measuring operation the measured values between these are interpolated on a linear basis. The AMR-CONTROL software is included with all our instruments free-of-charge.



System requirements

Connector - the new generation (code "E4")
For evaluation purposes : ALMEMO® devices in version V6 (2690-8, 2890-8, 8590, 8690, 5690, 2390-8, and 2390-5/S)

For user-defined programming : Option "KL" with devices 2690-8, 2890-9,8590, 8690, and 5690

ALMEMO®-D measuring module for thermocouples, types K, J, T, electrically isolated, up to 1000 V Type ZAD 950 AB

new!

- Electrically isolated measurement of thermocouples (in particular bare thermo-wire types) on live parts
- Digital transfer of measured values to the ALMEMO® measuring instrument
- Connecting cable, fitted with ALMEMO® D plug
- *New* A wide variety of connection options (see page 09.06)
  1. Direct connection to the input of an ALMEMO® measuring instrument optional ALMEMO® D extension cable, RS422, up to 100 meters - or over 100 meters using the customer's own cable
  2. For connection to a PC ALMEMO® USB data cable, with power supply
  3. For connection to an RS422 network ALMEMO® coupling with RS422 driver
- Sensor connection via 4-mm safety plug (with screw terminals)

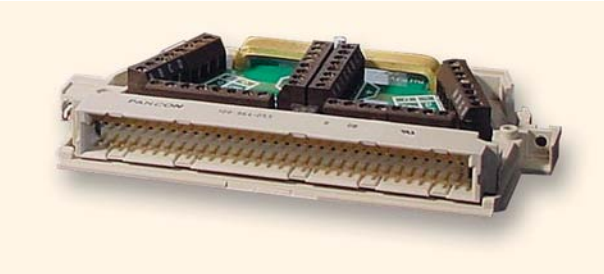
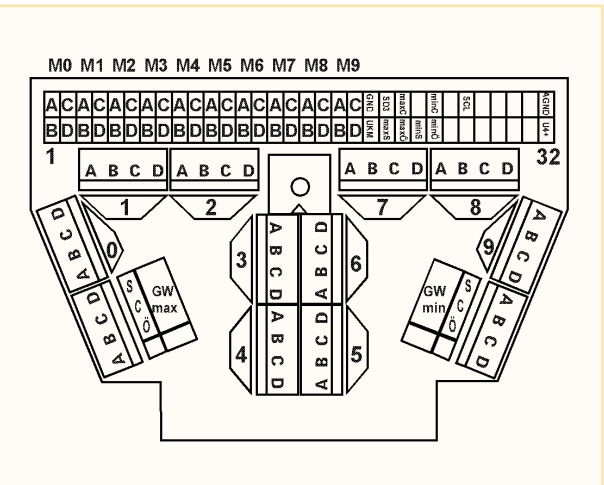
ALMEMO® 10-Fold MU Connector for ALMEMO® Plug-In Boards with 64-Pin Spring Contact Strip



\+ NOT suitable for sensors needing interface circuitry (e.g. 26 V, AC voltage, mA, humidity sensors, rotating vanes, frequency, pulse, rotational speed) no sensor supply possible)



\+ The current MU connector version, ZA5690MU, can only be used in conjunction with the new ALMEMO® 5690 systems.

The old MU connector version, ZA5590MU, can of course be used in conjunction with the old ALMEMO® 5590/5990 systems but is subject to certain restrictions with the current 5690 systems (e.g. only 1 measuring channel per input, no multi-point adjustment or connector linearization).

Types:

ALMEMO® 10-fold connector (64-pin) with EEPROM sensor memory
for connecting 10 sensors; on request pre-programmed to your specifications
for Data acquisition systems ALMEMO® 5690 (not for ALMEMO® 5590 / 5990)

INPUT CONNECTORS

ALMEMO® Connector Adapter Cable, Digital Input of Third Party Device to ALMEMO® Device Type ZA 1000A KSW / ZAD 919A Kxx

Existing equipment incorporating a digital interface can, thanks to our flexible ALMEMO® system, continue being used. For this purpose, we can offer you the following service :

1. We program a device type protocol for you, which matches the output interface of your device.
2. We fit the interface cable for your device with the matching ALMEMO® connector.

Description:

- Data acquisition from external devices with digital interface and integration in the data acquisition with ALMEMO® devices.
- The digital connector of the adapter cable provides an electrically isolated serial interface and includes an interface processor for protocol conversion.
- Value-adding to existing measuring technology at a very interesting price-performance ratio.

Examples:

- Scales and weighing equipment
- Dial gauges and displacement transducers
- Multimeters
- Incremental displacement transducers
- Flue gas analysers
- Keypads
- Mains supply unit with RS232 data output
- Precision pressure sensors
- Equipment for work place related comfort index measurements

Types:

For the purposes of programming the interface, please provide us with a detailed description of the output interface of the third-party device you want to have integrated, or a matching cable, or a connector including the pin configuration, plus the third-party device itself for the purposes of testing and checking.
